

Newmark Environmental Policy

Newmark Environmental Policy

Newmark Group, Inc. and its operating subsidiaries (collectively referred to herein as “**Newmark**”, “**our**” or “**we**”) acts responsibly in its operations with an understanding of impact on the environment. We have a baseline to understand the impact our business has on the environment and look for ways to reduce our footprint. As outlined below, we are pursuing traditional, as well as new and innovative, methods to achieve our goals.

Environmental focus and social responsibility are keys to driving down resource consumption. We realize our employees, independent contractors, subcontractors, suppliers, and clients are critical to the success of our initiatives in this area. We review and manage policies that will enable us to operate more sustainably. By sharing information and encouraging feedback, we continuously improve in our processes and procedures.

In tandem with our use of our Energy and Sustainable Services Guide, Newmark is pursuing the following environmental initiatives:

- Collecting utility (electricity, water, fuel/oil, natural gas, steam) consumption data from Newmark’s occupied space.
- Working towards future reduction of greenhouse gas emissions from Newmark’s occupied space and other carbon producing aspects of our business.
- Evaluate the purchase of RECs, PPAs and other off-site renewable options to help offset our carbon footprint. Pursue renewable energy procurement in areas where available and cost is comparable or better than alternatives.
- Sharing ideas that encompass the environmental interests of our stakeholders, employees, independent contractors, subcontractors, suppliers, and clients.
- Fostering relationships, allowing our business partners to share in each party’s vision and successes.
- Seeking new and innovative ways to find and drive efficiencies that result in environmental consumption reductions in the key areas of energy, water, and waste and the proliferation of best practices.
- Making continual improvements in environmental performance
- Operating our businesses and services to comply with applicable legal and compliance requirements.
- Monitoring and assessing our performance to help ensure the standards continue to be met and that this policy effectively communicates the environmental impact to our stakeholders.
